## GLASS FINISHING EQUIPMENT

### HYDRAULIC TILTING TROLLEY FOR SHEET GLASS

Automatic trolley to transport big glass sheets from one production unit to another, with hydraulic lifting system from 0° to 90 °.

The trolley receives the glass from any production line in vertical or horizontal way and is transported by the operator manually to any other place.

The operator activates on his control board the hydraulic pump, which lifts the glass from vertical to horizontal position and back, and gives the possibility to feed the glass onto any production line or washing machine.

The trolley has 3 positions:

1. Horizontal position for loading and unloading of roller conveyor.
2. Diagonal position (only for transport) in order to transport big sizes through the factory.
3. Vertical (loading or unloading) from washing machine or stacker.

The hydraulic motor of the trolley itself has an electric battery that can be charged like a forklift truck.

Therefore, the trolley can work free and needs no electrical connection when in operation.

## FEATURES

- Trolley movement easy by hand by the operator
- Hydraulic lifting system motorized, battery-powered for glass.
- Trolley adjustable in height to satisfy any working requirements.
- Trolley can accept glass sheets from 1000x1000 mm to 6000x3210mm
- Plastic wheels for easy loading and unloading glass.
- Electronic battery charger included 80A 24V
- Power installed 1,5 Kw
- Loading capacity: 600 kg.
- Remote control unit by cable to respect safe working distance
- All the controls of this trolley are operated by remote control board.
